

HOP Class Notes 5-4-2018

New Windows 10 version 1803

The latest version will be installing on your Windows 10 computer soon. If asked allow it to install.

Maintenance Programs

We reviewed the maintenance programs suggested to keep you computer running fast by removing the unwanted malware, cookies, and junk files. Here is a link to a "how to" paper I wrote on getting them and using them. If you are unsure, schedule some time with me to install and run them on your computer(s).

Toggle color on and off in Windows 10

Ctrl+Win+C

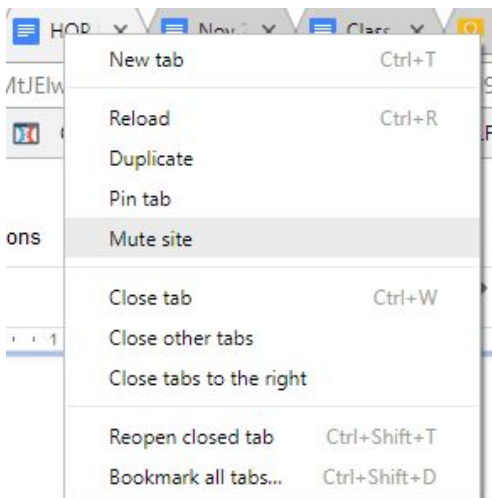

Rotate the screen with Ctrl+Alt+arrow keys

What's the Difference Between **Hibernate and Sleep?**

Hibernate: writes RAM to disk and then turns off the power

The contents of RAM are written to disk. All the loaded and running programs are included in the exact state they happen to be in, including any data they've initialized and maintained.

Sleep: keep RAM in RAM and power is left on at a low level. The battery is being used so do not do when not plugged in.

Mute speaker now in the Chrome browser tab

Tired of those web pages talking to you? Now you can right click on the tab you are in and select Mute

We covered a number of other questions during the session. I suggest you take advantage of the notes from other classes I have taught on my blog at <http://dickevanstraining.blogspot.com/>

And remember "I do house calls..."
