

## Heritage Class Notes 4-6-2018

By Dick Evans

Tired of getting those annoying phone calls every evening around supper time? Well we sure were and we found a way to eliminate them. Check out [NOMOROBO.COM](http://NOMOROBO.COM). The one catch is that you must be using a VOIP phone system. Comcast is VOIP and Century Link is not. There is a list on their website of who is and who isn't. How it works is that all incoming calls ring on your home phone and at their site. If the call is a robocall it will be intercepted by them, checked against their list of robocalls and hung up. If not on their list it rings through to your phone. Best of all is that it is free. Sorry it does not work for free on cell phones. They will handle your cell phone for \$1.99 / mo. We have been using it since January and have not received any robocalls.

You need to check out [missingmoney.com](http://missingmoney.com). Put in your name and current state. It comes back with a list of people that owe you money. One of our club members found over \$100 due him. Give it a try. I ran my name and did not find anything but one of my sons came back with \$100.

The latest Windows 10 update is out. It is release 1803 and you should see it downloading to your computer soon.

There is a new website for ccleaner and it is [ccleaner.com](http://ccleaner.com). This is one of the programs I suggest you run weekly to keep your computer clean. The others are malwarebytes, superantispyware, and glary utilities. Here is a link to a "how to" article I wrote. All of these programs are safe to use and save to upgrade.

We looked at a promo video of the new resort coming to Port Charlotte.

Tired of those ads showing up on most of the websites you visit? Then adblock is for you. It is an extension that can be added to Chrome and many of the other browsers that stops ads from showing on the web page.

<http://tinyurl.com/y6wqrek6>

Some interesting facts about which browsers are most popular:

Browser Market Share in United States Of America - February 2018

Chrome 51.56%

Safari 30.16%

Firefox 5.08%

IE 4.94%

Edge 3.45%

Bible Verse Desktop

Many people has the habit of reading a portion of the Bible daily or even several times a day. This little and free program allows you to do it in a very easy and convenient form.

What is a mobile hotspot device?

With a mobile hotspot, you can create an Internet connection for up to five mobile devices on a 3G phone and up to 10 on a 4G LTE smartphone. After a few quick steps, the phone creates its own secure Wi-Fi network, which your devices can join.

We used a hotspot today that I carry with me to access the Internet. Mine connects using the cell phone towers and the speed is about 4-5 Mbps use a 4G LTE connection. You can pick up one at most of the cell phone stores. You can also use your cell phone a hotspot. Data rates apply.
